

The screenshot shows the AWS CloudFront service page. The left sidebar lists services like S3, S3 Glacier, and AWS Snow Family. The main content area displays a "Top features" section with "Create Vault" and a "Feature spotlight" for S3. A "Cost breakdown" sidebar on the right shows a single entry for "applications". The bottom navigation bar includes links for CloudShell, Feedback, and various AWS services.

The screenshot shows the "Create bucket" page in the AWS S3 service. It includes sections for "General configuration" (AWS Region set to US East (N. Virginia) us-east-1, Bucket type set to General purpose), "Bucket name" (vpc-flowlog-2994), and "Copy settings from existing bucket - optional" (Choose bucket). The "Object Ownership" section at the bottom discusses controlling ownership of objects written to the bucket. The bottom navigation bar includes links for CloudShell, Feedback, and various AWS services.

Amazon S3 > Buckets > Create bucket

Format: s3://bucket/prefix

Object Ownership Info

Control ownership of objects written to this bucket from other AWS accounts and the use of access control lists (ACLs). Object ownership determines who can specify access to objects.

Object Ownership

ACLs disabled (recommended)
All objects in this bucket are owned by this account. Access to this bucket and its objects is specified using only policies.

ACLs enabled
Objects in this bucket can be owned by other AWS accounts. Access to this bucket and its objects can be specified using ACLs.

⚠️ We recommend disabling ACLs, unless you need to control access for each object individually or to have the object writer own the data they upload. Using a bucket policy instead of ACLs to share data with users outside of your account simplifies permissions management and auditing.

Object Ownership

Bucket owner preferred
If new objects written to this bucket specify the bucket-owner-full-control canned ACL, they are owned by the bucket owner. Otherwise, they are owned by the object writer.

Object writer
The object writer remains the object owner.

Block Public Access settings for this bucket

Public access is granted to buckets and objects through access control lists (ACLs), bucket policies, access point policies, or all. In order to ensure that public access to this bucket and its objects is blocked, turn on Block all public access. These settings apply only to this bucket and its access points. AWS recommends that you turn on Block all public access, but before applying any of these settings, ensure that your applications will work correctly without public access. If you require some level of public access to this bucket or objects within, you can customize the individual settings below to suit your specific storage use cases. [Learn more](#)

The screenshot shows the 'Create flow logs' page in the AWS VPC console. The top navigation bar includes tabs for 'Inbox', 'ChatGPT', 'AWS Skill Builder', 'Cloud Quest', and 'VPC | us-east-1'. The main content area is titled 'Subnets > Create flow logs'. It has sections for 'Send to CloudWatch Logs' (radio button), 'Send to an Amazon S3 bucket' (radio button selected), 'Send to Amazon Data Firehose in the same account' (radio button), and 'Send to Amazon Data Firehose in a different account' (radio button). A 'S3 bucket ARN' input field contains 'arn:aws:s3:::vpc-flowlogs-3748'. A 'Create S3 bucket' button is next to it. A note says 'Please note, a resource-based policy will be created for you and attached to the target bucket.' Below this, 'Log record format' is set to 'AWS default format' (radio button selected). A 'Format preview' section shows the log record format: \${version} \${account-id} \${interface-id} \${srcaddr} \${dstaddr} \${srcport} \${dstport} \${protocol} \${packets} \${bytes} \${start} \${end} \${action} \${log-status}. A 'Copy' button is available for this preview. The bottom of the page shows standard browser controls and a status bar indicating 'CloudShell Feedback'.

The screenshot shows the 'fl-05be7bf804ced3e6a' flow log details page. The top navigation bar is identical to the previous screenshot. The main content area shows a green success message: 'Successfully created flow log for the following resource: subnet-05bbc0fd57df4bf5d'. Below this, a table displays flow log settings: Flow Log ID (fl-05be7bf804ced3e6a), Destination Type (s3), Traffic Type (Reject), File Format (Plain text); Name (my-blocked-flowlogs), Destination Name (vpc-flowlogs-3748), Max Aggregation Interval (1 minute), Hive Compatible Partitions (Not enabled); State (Active), IAM Role (-), Log Format (Default), Partition Logs (Daily); Creation Time (Friday, November 28, 2025 at 08:36:51 EST), Cross Account IAM Role (-). Below the table are 'Tags' and 'Integrations' tabs, and a 'Manage tags' button. The bottom of the page shows standard browser controls and a status bar indicating 'CloudShell Feedback'.
